

WHAT USE IS A LIVE AREA....

*..without a SoundField ?*

The SoundField MKV's patented four capsule tetrahedral array picks up sound from a three dimensional field allowing the user to create an infinitely variable mono, stereo, or surround sound mix between the "dry" direct sound and the ambient reflections - an invaluable asset when wishing to retain the "feel" of a carefully chosen venue.

It is no surprise that the SoundField MKV and the portable ST250 system are the choice of opera houses, classical recordists and top studios worldwide.

After all, what use is a live area - without a SoundField?

SOUNDFIELD technology is fully patented and is only available from

CHARLOTTE ST  
WAKEFIELD  
WEST YORKS
